

# WHDTs 4-Bit Electronic Clock DIY Kits

## 1. Introduction

YSZ-4 4-Bit electronic clock is equipped with STC11F02E chip and 16 electronic components. It can make two alarm clock time, on time alarm (8:00-20:00), accurate adjustment, etc.

## 2. Parameter

NO.	Parameter	Value
1	Operating voltage	DC 3V-6V
2	PCB board material	RF-4
3	Size	52mm*42mm

## 3. Principle

The whole system consists of MCU minimum system, key input circuit, display circuit, buzzer circuit and power supply parts.

1>. MCU minimum system: including the U1 (STC11F02E), C1, R1 for power on reset circuit .Clock circuit is composed of C2, C3 and Y1.

2>. The pressed key input circuit: composed of S1, S2, short press the button once a loud buzzer rang, long press the button once two loud buzzer rang.

3>. The display circuit: 4bits common cathode and on PR1 Resisters Packs .

4>. Buzzer circuit: composed of Q1, R2 and LS1, short press the button once a loud buzzer rang, long press the button once two loud buzzer rang.

5>. J1 is 5v power supply input terminal, C4 is filtering.

## 4. Operation instruction

It will display 12:59 when Power-on, the normal interface is("hours:minutes").

Default the two alarm clock time are opened. The first alarm clock has been set at 13:01 and the second alarm clock has been set at 13:02.

Short press S2 after power-on to switch between time-division traveling time interface ("hours:minutes) and minute-second walking time interface ("minutes:seconds");

Long press S1 to enter the system Settings Menu. There are A, B, C, D, E, F, G, H, I submenu. Short press S1 submenu to add 1 and finally return to travel time interface.

#### **A sub menu : Correction for hours**

Press S2 to increase by 1; After adjusting, press S1 to save and exit this submenu to enter the B submenu.

#### **B sub menu : Correction for minutes**

Press S2 to increase by 1. After adjusting, press S1 to save and exit this submenu to enter the C submenu.

#### **C sub menu: On time alarm switch**

The default state is ON (on-time-alarm is open from 8:00 to 20:00). It will switch between ON and OFF (on-time-alarm is closed) after press S2. Short press S2 to save the adjusted results and quit C submenu, enter D submenu.

#### **D sub menu: The first alarm-clock switch**

The default state is ON (the first alarm-clock is opened). It will switch between ON and OFF(first-alarm-clock is closed) after press S2. If it is set to ON, short press S1 to save and quit, then enter E submenu; If it is set to OFF, short press S1 to save and quit , then enter G submenu;

#### **E sub menu: The first alarm clock set for hours**

Display data will add 1 after press S2. After adjusting the E Submenu, then short press S2 to save the adjusted results and quit E submenu, enter F submenu.

#### **F sub menu: The first alarm clock set for minutes**

Display data will add 1 after press S2. After adjusting the F submenu, then short press S2 to save the results and quit F submenu, enter G submenu.

#### **G sub menu: The Second alarm-clock switch**

The default state is ON (the second alarm-clock is opened)

It will switch between ON and OFF(second-alarm-clock is closed) when press S2.

If it's set to ON, short press S1 to save and quit, then enter H submenu;

If it's set to OFF, short press S1 to save and quit, then enter normal interface;

**H sub menu:** The second alarm clock set for hours

Display data will add 1 after press S2. after adjusted the F Submenu, then short press S2 to save the adjusted results and quit H submenu, enter I submenu.

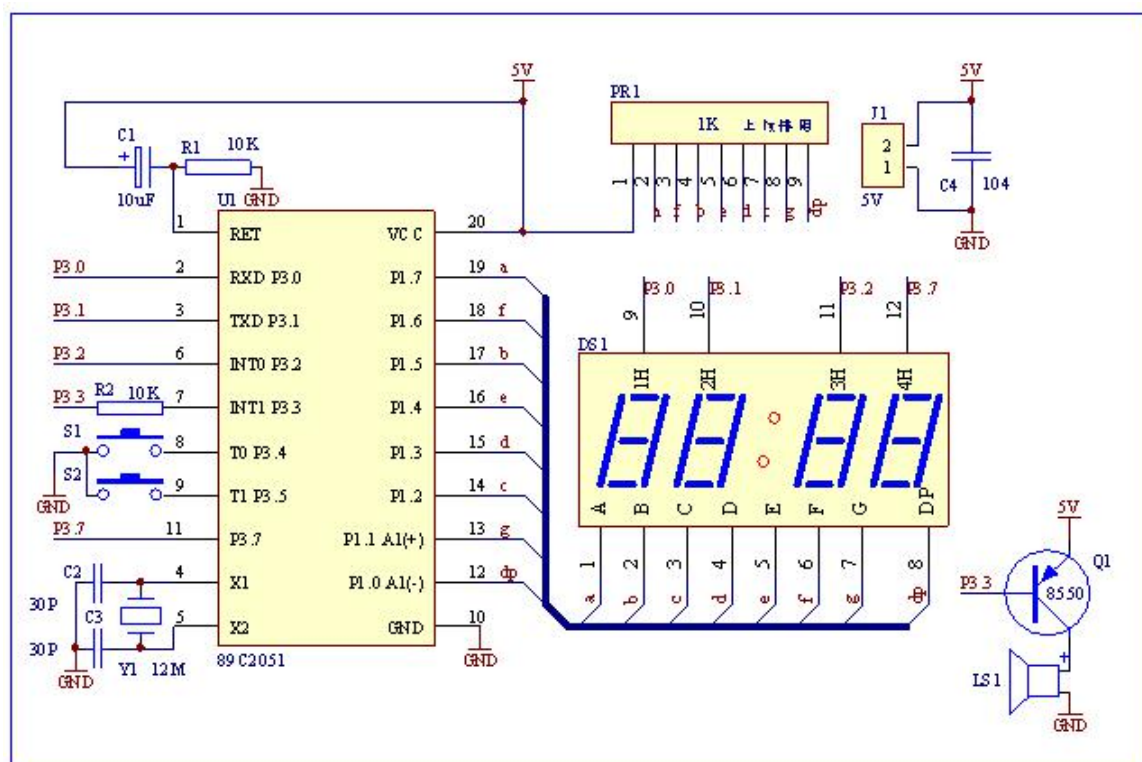

**I Sub menu:** The second alarm clock set for hours

Display data will add 1 after press S2. After adjusting the I Submenu, then short press S2 to save the adjusted results and quit H submenu, then enter normal interface.

**Second correction:**

Short press S2 in the normal interface, then enter " minutes : seconds" interface. Long press S2, make the second zero. Then short press S2 twice enter normal interface.

## 5. Schematic

**Note:** When installing PR1 exclusion, please pay attention to its direction. The side of the word is facing the MCU.

Users can complete the installation by PCB silk screen and component listing. **Please do not have pseudo welding.**

## 6. Component listing

NO.	Component Name	PCB Marker	Parameter	QTY
1	Metal Film Resistor	R1, R2	10K	2
2	Ceramic Capacitor	C2,C3	30pf	2
3	Ceramic Capacitor	C4	0.1uf 104	1
4	Electrolytic Capacitor	C1	10uF/25V	1
5	Network Resistor	PR1	1K	1
6	Crystal Oscillator	Y1	12MHz	1
7	S8550	Q1	TO-92	1
8	Button	S1,S2	6*6*5mm	2
9	STC11F02E	U1	DIP-20	1
10	IC Socket	U1	DIP-20	1
11	Active Buzzer	LS1	5V	1
12	Digital Tube	DS1	4Bit Red	1
13	DC Socket	J1	3.5mm	1
14	Power Cable		USB to 3.5mm	1

## 7. Installation Steps

Step 1: Install 2pcs resistor, 3pcs ceramic capacitor, 1pcs crystal oscillator

Step 2: Install 1pcs network resistor. Please pay attention to the installation direction.

Step 3: Install IC socket. Please pay attention to the installation direction.

Step 4: Install 2pcs button & 1pcs S8850. Care the installation direction.

Step 5: Install 1pcs Power socket; 1pcs Electrolytic Capacitor; 1pcs Buzzer.

Step 6: Install 4Bit Digital Tube and IC. And then test!

8. Effect demonstration, Thanks for reading!
